

(a) Europa Subsurface Ocean & Diurnal Tidal Flexure

Diurnal Tidal Engine : $\sigma_{\max} = 120 \text{ kPa} \cdot (20 \text{ km/h})^{1/2} \cdot (e/0.009)$
Subsurface ocean decoupling amplifies surface flexing by $49.2 \times$,
exceeding the 40 kPa tensile strength of fractured surface ice.

(b) Cycloidal Crack Arc & Cusp Formation (Hoppa 1999)
